

A MAJOR GLOBAL BANK MIGRATED TO PRIVATE CLOUD

NEED:

Our client is a large American bank planning to migrate its data, applications, and services to a private cloud. The challenge was to create a wide private cloud solution that includes automation as well.

SOLUTION:

- Provided Architected and developed Enterprise-wide private cloud solution (Shared Services).
- Provided built for supporting .NET, Java Portal, MQ, BOO, Data stage, Cadis, SQL Server 2008R2, SSRS, Crystal Reports, Oracle, and DB2, by analyzing existing architecture, compatibility techniques, evaluating solution alternatives, developing prototypes, writing detailed technical requirements, and setup of the private cloud using automation.
- Provided Technical Reviews & project assessments at the different phases of projects. We were instrumental in presenting the strategy and technology state to the CTO office during the periodic tollgate reviews.
- Migrated more than 400+ applications to the private cloud.
- Managed more than 10 resources of offshore, nearshore, and onshore.

OUTCOME:

iSmile Technologies successfully migrated all the services, applications, and data to the private cloud. The automated and secure private cloud helps the bank achieve its cloud migration goals with intuitive lift-and-shift workflows, robust backup, cost-cutting storage efficiencies, and high availability.

The client was a major bank based in America which transformed the plans of the world's most successful individuals, families, and institutions into action so that we can help our clients reach their most ambitious goals.
